GTX (Great Train eXpress)

Project Overview
- Number of routes: 3
- Length of track: 174.0km
- Average speed: 100km/h
- Maximum speed: 200km/h
Development Concept

- The Great Train Express (GTX) is a new transportation network that will connect the Korean capital region from east to west and north to south (to be constructed 40 to 50 meters below the ground).
- GTX heralds a metropolitan transportation revolution that combines high-speed transport with low-carbon emissions. (1/6 vehicle CO2 emissions, 1/8 energy consumption)
- It is the starting point for the development of a Mega-City with global competitiveness.

Investment Conditions and Investment Process

- Optimal transport system for the Seoul metropolitan area and its population of 24 million.
- The system is expected to be used by 1.42 million people per day once it begins service in 2016.
- Possible to share participation through consortium related with GTX development project.
- Department stores or other facilities in or nearby commercial complexes surrounding GTX stations
- Direct investment in massive retail facilities or by shared participation.
